Find the Duplicate Number

Given an array of integers nums containing n + 1 integers where each integer is in the range [1, n] inclusive.

There is only **one repeated number** in nums, return *this repeated number*.

You must solve the problem **without** modifying the array nums and uses only constant extra space.

Example 1:

Input: nums = [1,3,4,2,2]

Output: 2

Example 2:

Input: nums = [3,1,3,4,2]

Output: 3

Example 3:

Input: nums = [3,3,3,3,3]

Output: 3

Constraints:

- 1 <= n <= 10⁵
- nums.length == n + 1
- 1 <= nums[i] <= n
- All the integers in nums appear only **once** except for **precisely one integer** which appears **two or more** times.
