Two Sum

Given an array of integers nums and an integer target, return *indices of the two* numbers such that they add up to target.

You may assume that each input would have *exactly* one solution, and you may not use the *same* element twice.

You can return the answer in any order.

Example 1:

Input: nums = [2,7,11,15], target = 9

Output: [0,1]

Explanation: Because nums[0] + nums[1] == 9, we return [0, 1].

Example 2:

Input: nums = [3,2,4], target = 6

Output: [1,2]

Example 3:

Input: nums = [3,3], target = 6

Output: [0,1]

Constraints:

- 2 <= nums.length <= 10⁴
- $-10^9 <= nums[i] <= 10^9$
- $-10^9 <= target <= 10^9$
- Only one valid answer exists.
